

XM is one of the greatest things that has happen to redio in a very long time. It's about time that we had a choice with the clarity and programming range of XM Satillite Radio. I travel over 35,000 miles each year in my car, and the ability to listen to exactly what I want, when I want is invaluable to me. Couple that with the ability to receive instant traffic and weather when I NEED it and you have a service that I, for one, don't want to live without. The Traffic and Weather have channels have allowed me to avoid traffic problems and weather related delays. And with gas being \$2.10 per gallon, anytime I can avoid sitting in traffic helps me and everyone else by not having another vehicle in the way.

PLEASE don't allow the NAB to do anything to limit XM, or any other Satillite service. I want MORE information and choices, not only the ones the NAB sees fit to let me have.

Thank you,

Greg Lindgren
